

X-Ray Classification Report

Prediction Result: PNEUMONIA

Prediction Analysis: The analysis indicates that pneumonia is present. Further medical evaluation is recommended to confirm the diagnosis and determine the appropriate treatment.

Suggested Medications:

1. Antibiotics: Amoxicillin or Azithromycin (for bacterial pneumonia)
2. Antiviral drugs: Oseltamivir (if viral pneumonia is suspected)
3. Pain relievers: Ibuprofen or Acetaminophen for managing fever and discomfort.

Recommended Additional Scans:

1. Chest CT scan: To confirm the extent of infection.
2. Blood tests: To check for the presence of bacterial or viral infections.
3. Sputum test: To analyze lung secretions and identify the infection source.
4. Oxygen saturation test: To assess oxygen levels in the blood.
